

COVERTEK Wall Clock Covert Video System

**New For 2008- Low Lux cameras, Higher resolution, supports
8 Gig SD cards.**

**Completely Self Contained With Covert Camera, Digital Video Recorder Motion Activation And
Time And Date Stamping**

New And Improved!

The CovertTek Cube Clock Covert Video Camera is now better than ever with the New and improved Version 2.1 Feature: Low Lux cameras, Higher resolution, supports 8Gig SD cards.

Two easy ways to view the recording

The CoverTeK is the only unit on the Market today that can play back directly from the unit itself. Just connect the provided RCA Cable to any TV or Monitor to see what has been recorded or you can take the SD Card out of the unit, use the provided card reader, view the video right from a PC using Windows Media player. Now we alleviated the need for any additional software. It's just that easy. Capable of being built into different styles and featuring a knockout price, StealthCam™ is the only nanny cam you should stock.

Private Investigative Agencies Can Make Huge Revenue Renting These!

That IS correct! CoverTeK easily rent to clients for several hundred dollars per week! You can easily add lucrative income to your existing agency by simply investing in a couple of them and then offering them for rent to your clients. They are very easy and quick to set up and completely self contained. Just think if you could rent only two StealthCams per week at the discounted rental of just \$200.00 per week. That adds an amazing \$1,600 a month to your business and you don't have to do anything except collect your rental fee, deposit and hand the client the covert system. That comes out to an extra \$19,200 in extra incoming per year on a small scale by simply offering these amazing units as rentals to your clients. Only a fool would not want to offer them. However, in order to offer them, you MUST have a couple of them in stock and ready to rent. It's a very small investment for a huge profit margin that requires almost no labor on your part!

The Amazing Advantage Of The SD Card Memory System

Each time you develop video evidence with time and date stamping through motion activation, you can simply and quickly remove the card once a day or every couple of days and leave the StealthCam in place for more covert video evidence development by simply placing another SD card in the unit. You could be reviewing covert video evidence on one card while the camera is obtaining even more covert video evidence while your reviewing process is happening because you simply take the memory card out and leave the StealthCam in place for more covert video capture!

Completely Self Contained And A Total Covert Video System

Each CoverTeK is totally covert and completely self contained. There is no need to worry about wireless connections or running video wire to a video recorder as everything; including a digital video recorder; is built right in. The camera goes on and off when motion is detected so it's always ready to covertly video record when the action happens. Each video evidence is time and date stamped so you know exactly when the evidence was captured.

Great For Any Room! Living Room, Dining Room, Kitchen, Bedroom, Office, Garage Or Anywhere!

Quick And Easy Setup!

These units are quick and easy to set up. Just place them and plug them in. The camera is run off the power cord built into the every day object.

It's your move! If you are in the covert surveillance business, these high demand innovative and inexpensive systems are almost a must have and you can make huge profits with them at the same time. We suggest you try one or two and we know that you will quickly be back to expand your stock of them if you are going to rent them out simply because they rent fast and easy through investigative agencies.

New Generation Model for 2008

Now with a new hidden camera that gives you low light video recording and up to 20 hours of recording time with an 8 GB card, the CovertTek Cam is better than ever!
